

Labwork 6

HPC – Map by GPU

Le Nghiem Thanh Thuy - 2540023
University of Science and Technology of Hanoi

1 Preparation

The first image is `coffee()` from `skimage.data`, size 600×400 with 3 channels. The second image is raining in town which downloaded from internet, resized to 600×400 .

2 Binarization

Converting the image to grayscale and then binarizing it with a parameterized threshold, we get the following results:

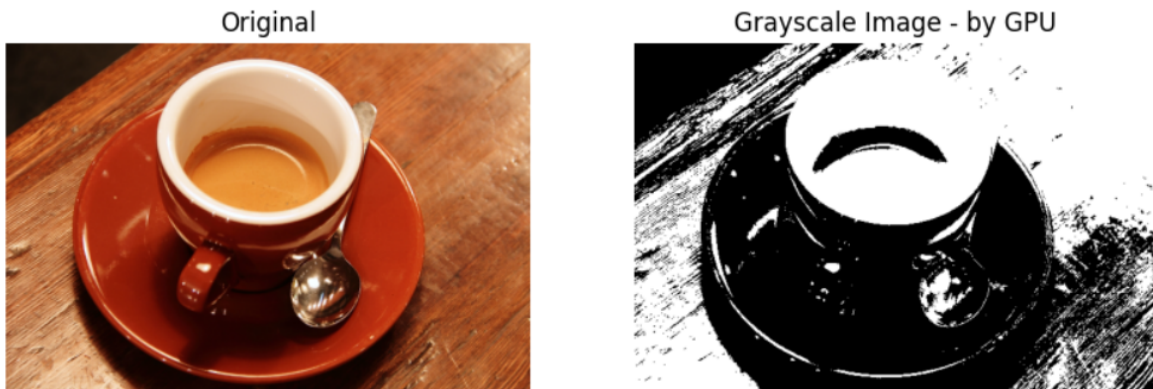

Figure 1: Binarization with threshold = 100.

3 Brightness Control

Increasing the brightness of the image by a parameterized value, we get the following results:

Figure 2: Brightness control with parameter = 80.

4 Blending images

Combining two images with a parameterized alpha, we get the following results:

Figure 3: Blending images with alpha = 0.3.
